PROTFOLIO

DREAM VERSE

dreamverse.onrender.com

An online platform with basic social media features. Users can share their imaginations in multimedia form in two ways. 500 characters limited post called Fmini and a blog like story which can be posted with rich text editor called Fantom

This platform is made with nodejs and express using pug and bootstrap for user interface and mongodb for database. This uses several libraries like passport, google-oauth, JWT, axios, multer et cetera as utilities and shows my strong foundation in nodejs, express js, MongoDB, bootstrap, and utilities like git.
